

Exploratory Plots of Google Scholar Citation Data

Relative Growth over Time

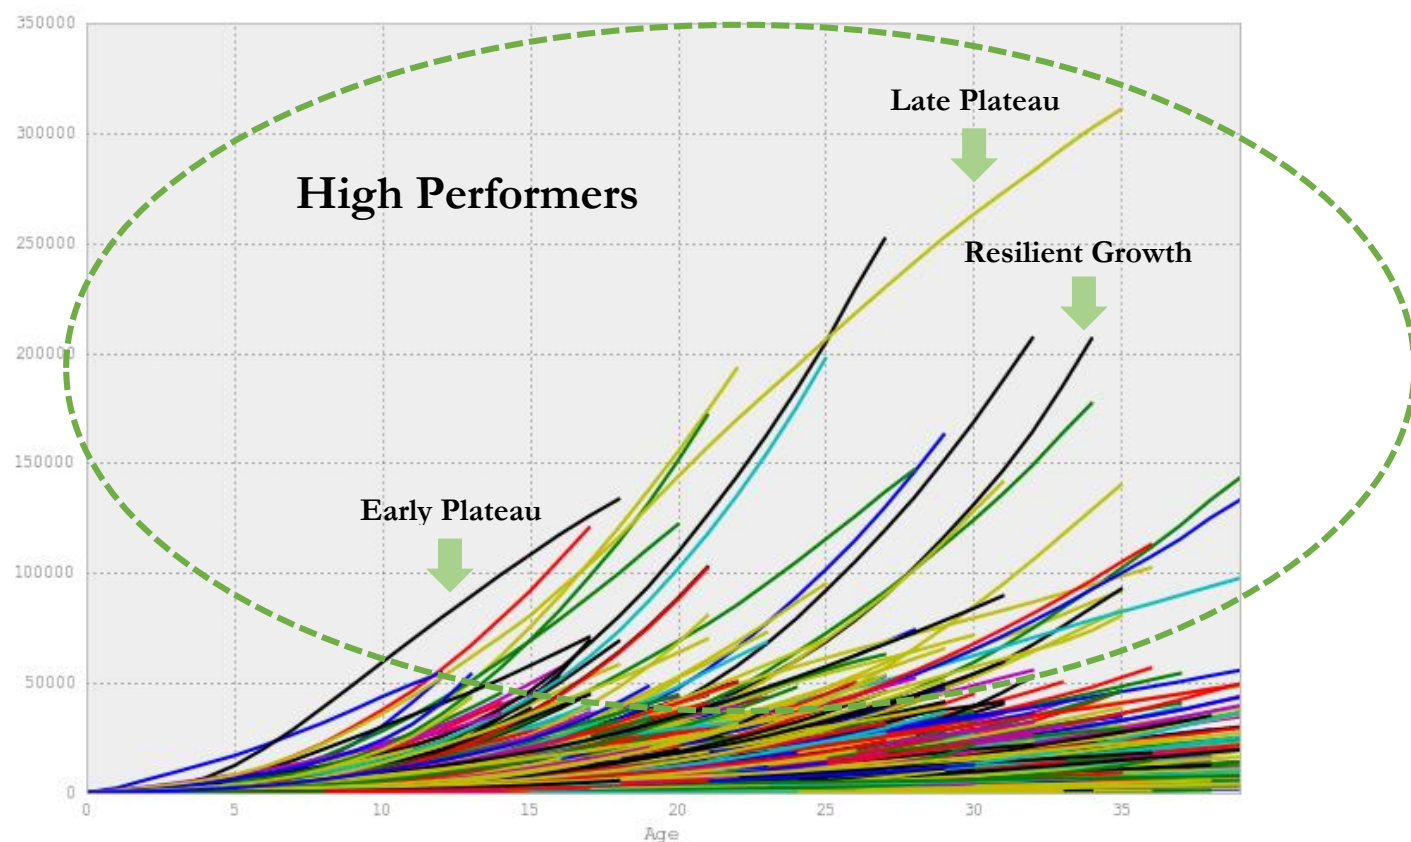

We see that the majority of citation growth occurs in the first 7-10 years before largely flattening out.

Citations over Time

We see that most high-performing professors are still in their growth stages. However, a few long-time professors have begun to show signs of decline in citations. Most professors seem to follow a Bass-like curve.

Cumulative Citations over Time

We see that many professors' citations follow a cumulative Bass Diffusion Model, shown below:
